Summary

Software engineer with over 5 years of professional experience in TypeScript, JavaScript and React.js. I've worked in large cross-functional teams as well as dynamic startups.

While my core strength is frontend, I have hands-on full stack experience with Node.js and am comfortable diving into backend tasks. I also have mentoring experience and have contributed to hiring decisions by technical interviews.

Skills

Frontend: React.js, TypeScript, JavaScript, Next.js, Vue.js, Nuxt, TanStack Query, WebSockets, Tailwind, CSS Modules, Accessibility, Core Web Vitals;

State management: Redux, Vuex, Zustand;

Backend: Node.js, Express.js, NestJS, PostgreSQL, Prisma, MongoDB, REST APIs, BFF services;

Infrastructure & observability: Docker, Grafana, Sentry, GitHub Actions, GitLab CI

Testing: Playwright, Cypress, Jest, Vitest;

Build tools: Webpack, Vite;

Visualisation: d3.js, Three.js;

AI tools: Claude Code, Cursor;

Work experience

Software engineer

September 2024 – Present

[Wildberries](#), Kazakhstan - remote

As founding frontend engineer, built [Wibes](#) from scratch — a short-form video platform with in-video product purchasing, integrated into Wildberries, one of the largest e-commerce marketplaces in Eastern Europe with 120M+ MAU.

- Defined and implemented architecture for a short-form video platform, building scalable foundations for SSR-driven content delivery, video feeds, live streaming, and interactive commerce features.
- Built interactive commerce features including video playback, product overlays, shopping cart integration, and real-time purchase flows, working across frontend and BFF services using React, TypeScript, Next.js, and Node.js.
- Reduced backend load by 50% by eliminating duplicate API calls in SSR using React 19 cache, decreasing redundant requests across multiple pages.
- Shipped SSR metadata, structured data, and sitemaps for 600k+ videos and 2.5M+ indexed pages, enabling SEO optimisation and improving organic traffic growth.
- Closely collaborated with stakeholders, designers, and backend engineers to deliver complex features in fast iteration cycles, and participated in A/B testing to validate product decisions and optimize the user funnel.
- Interviewed frontend engineers across technical and culture-fit stages, participating in hiring decisions.

Software engineer

December 2022 – September 2024

[VK](#), Russia - remote

Developed the web version of Mail.ru, a large-scale email platform with 25M+ monthly active users, building and maintaining high-load frontend features and rich text editing functionality.

- Developed frontend features within a microfrontend architecture for both B2C and enterprise versions of the Mail.ru web client.
- Implemented rich text editor functionality for the Mail.ru web client, including an @mention system and a custom table editing plugin for the WYSIWYG email composer.
- Expanded Playwright E2E coverage for critical user flows, reducing manual regression testing time from 2 days to 1 day.
- Improved frontend compatibility and stability across browsers, mobile WebViews, and on-premise enterprise environments.

Frontend developer

September 2020 – December 2022

[Nauka](#), Russia

Worked across multiple enterprise web projects involving data visualization, 3D editors, CRM systems, and realtime communication tools.

- Built an interactive pipeline vizualization tool (gas systems) using React.js and d3.js, rendering thousands of nodes (pipes, valves) with zoom/pan and real-time interaction.
- Developed a browser-based 3D editor using Three.js and React for viewing and editing industrial models with thousands of scene objects, implementing rendering optimizations, object selection, and camera navigation.
- Built a CRM access rights system with Vue.js, implementing complex RBAC permission logic and optimizing rendering performance for large datasets using lazy loading and pagination.
- Integrated the open-source WebRTC-based [Jitsi](#) solution for audio and video calls into the corporate messenger, eliminating the need for third-party video conferencing licenses and reducing operational costs.
- Introduced end-to-end testing with Cypress, increasing test coverage to ~45% of critical flows and reducing production issues.

Junior frontend developer

June 2020 – August 2020

LeadVertex CRM, Russia

- Developed a React-based single-page application for a CRM platform, replacing parts of the legacy frontend.
- Migrated the codebase from JavaScript to TypeScript, improving type safety and reducing runtime errors.
- Improved cross-browser compatibility, resolving inconsistencies across major browsers.

Education

Master's Degree in Engineering — Air Traffic Radio Engineering
Saint Petersburg State University of Civil Aviation — 2018-2023
